

Slide 1: Title & Platform Overview

Slide 1 of 10

VISUAL LAYOUT

Sleek dark UI platform mockups, SPEECHCARE AI logo, Team Details & Subtitle.

PRESENTER SCRIPT (WHAT TO SAY)

*Good morning/afternoon everyone. Today, I am proud to present **SPEECHCARE AI**, a next-generation clinical services platform designed to bridge the gap between Speech-Language Pathologists, Student Therapists, Clinical Supervisors, and Patients.*

Speech therapy requires high precision, continuous patient engagement, and rigorous clinical oversight. SPEECHCARE AI digitizes this workflow end-to-end, combining real-time audio analytics, multi-role clinical supervision, intelligent case allocation, and multi-lingual accessibility.

KEY TALKING POINTS

- All-in-one clinical management platform for speech-language pathology.
- Serves 4 distinct user roles: Student Therapist, Supervisor, Admin, Patient.
- Deployed live on Vercel (Frontend) and Render (Backend API).

Slide 2: Clinical Problem Statement

Slide 2 of 10

VISUAL LAYOUT

3-Column Comparison: High Supervisor Ratios, Fragmented Care, Language Barriers.

PRESENTER SCRIPT (WHAT TO SAY)

In clinical education and healthcare settings today, we face three major bottlenecks:

- 1. High Student-to-Supervisor Ratios:** Clinical supervisors are overwhelmed reviewing physical SOAP notes, treatment plans, and tracking student competencies manually.
- 2. Patient Disengagement & Limited At-Home Practice:** Patients often lack interactive, feedback-driven practice tools between in-clinic therapy sessions.
- 3. Linguistic & Regional Barriers:** Millions of patients in multilingual regions cannot access digital therapy tools in their native languages.

KEY TALKING POINTS

- Manual supervision slows down student clinical evaluations.
- Lack of objective home practice metrics delays patient recovery.
- Language mismatch creates compliance barriers in healthcare delivery.

Slide 3: The SPEECHCARE AI Solution

Slide 3 of 10

VISUAL LAYOUT

4 Core Solution Pillars Diagram (Multi-Role, Audio Studio, Multilingual, Telemetry).

PRESENTER SCRIPT (WHAT TO SAY)

SPEECHCARE AI addresses these challenges with a unified digital ecosystem built around four core pillars:

- **Multi-Role Workflows:** Customized portals for Student Therapists, Clinical Supervisors, Administrators, and Patients.
- **Speech Practice Studio:** Interactive web-audio waveform analyzer providing instant visual and acoustic feedback.
- **Multilingual Engine:** Complete UI localization across 8 major Indian languages.
- **Smart Clinical Supervision:** Structured therapy plan reviews, competency tracking, and automated trial data management.

KEY TALKING POINTS

- Real-time Web-Audio visualizer for acoustic frequency feedback.
- Strict patient scoping & data privacy safeguards.
- Integrated SOAP note auto-generation and clinical logging.

Slide 4: Student Therapist Portal & Scoping

Slide 4 of 10

VISUAL LAYOUT

Therapist Dashboard Screenshot, Patient Caseload List, Private Scoping Badge.

PRESENTER SCRIPT (WHAT TO SAY)

*Let's look at the **Student Therapist Portal**. When a student logs in, they get immediate access to their assigned caseload.*

*A critical feature we implemented is **Strict Patient Scoping**: newly registered patients belong exclusively to the student therapist who registered them. However, students can also access shared demo cases (like Rahul Verma) for learning reference without exposing other students' private patient data.*

KEY TALKING POINTS

- Dual query strategy guarantees privacy of newly registered patients.
- Sample/demo dataset remains available for training reference.
- Quick access to session records, milestone progress, and SOAP logs.

Slide 5: Real-Time Speech Practice Studio

Slide 5 of 10

VISUAL LAYOUT

Audio Waveform Visualizer, Record / Playback Controls, Acoustic Score Gauge.

PRESENTER SCRIPT (WHAT TO SAY)

*The centerpiece for patient therapy is the **Speech Practice Studio**.*

Using native browser Web-Audio APIs, patients and therapists can record speech stimuli in real-time, view live frequency waveforms, listen to instant playback, and log objective acoustic scores. Once completed, the session automatically logs SOAP (Subjective, Objective, Assessment, Plan) clinical notes directly to the patient's health record.

KEY TALKING POINTS

- Dynamic Web-Audio canvas visualizer for real-time waveform display.
- Instant playback and acoustic confidence rating.
- Automated SOAP note sync with backend database.

Slide 6: Multilingual Accessibility Engine

Slide 6 of 10

VISUAL LAYOUT

Language Selector Dropdown: English, Telugu, Hindi, Kannada, Tamil, Malayalam, Marathi, Bengali.

PRESENTER SCRIPT (WHAT TO SAY)

India is a linguistically diverse nation, and therapy must be delivered in the patient's mother tongue.

*SPEECHCARE AI includes a built-in **Multilingual Engine**. With a single click in Settings, the entire user interface—navigation bars, page headers, studio buttons, and clinical forms—instantly translates into **Telugu, Hindi, Kannada, Tamil, Malayalam, Marathi, Bengali, or English**.*

KEY TALKING POINTS

- React useTranslation() hook dynamically updates UI text.
- Supports 8 major regional Indian languages.
- Improves patient compliance and clinical accessibility.

Slide 7: Supervisor Command Center

Slide 7 of 10

VISUAL LAYOUT

Supervisor Dashboard, Plan Review Queue, Student Competency Matrix.

PRESENTER SCRIPT (WHAT TO SAY)

For senior clinicians, the **Supervisor Command Center** provides complete oversight.

Supervisors can:

1. Review and approve student-submitted therapy plans.
2. Monitor high-priority cases with automated alert flags.
3. Track student clinical competencies across diagnostic skills, goal setting, and session handling.

KEY TALKING POINTS

- Streamlined review workflow for therapy plan approval.
- Competency matrix across 4 clinical skill metrics.
- Automated telemetry alert flags for high-priority patient cases.

Slide 8: Institution Admin & Trial Cleanup

Slide 8 of 10

VISUAL LAYOUT

Admin User Management Dashboard, Role Stat Counters, Delete Confirmation Modal.

PRESENTER SCRIPT (WHAT TO SAY)

The **Administrator Portal** equips institute directors with macro-level analytics and user management tools.

We have built a dedicated **Account Management** dashboard. Admins can view all registered accounts, filter by role, and safely clean up temporary trial accounts while maintaining data integrity across MongoDB.

KEY TALKING POINTS

- Role filtering: Student Therapists, Supervisors, Administrators.
- Cascaded deletion clears user-created patients, cases, and evaluations.
- Maintains default seed dataset intact for ongoing training.

Slide 9: Technical Architecture & Security

Slide 9 of 10

VISUAL LAYOUT

Tech Stack Architecture Diagram (React 19, TypeScript, Express API, MongoDB Atlas, Vercel/Render).

PRESENTER SCRIPT (WHAT TO SAY)

Under the hood, SPEECHCARE AI is built with modern, production-grade technologies:

- **Frontend:** React 19, TypeScript, TailwindCSS v4, Lucide icons, Vite.
- **Backend:** Node.js, Express REST API, JWT Authentication, Password Hashing.
- **Database:** MongoDB Atlas with Mongoose schema validation.
- **Cloud Deployment:** Hosted on **Vercel** (Frontend CDN) and **Render** (Backend Web Service) with automated CI/CD deployment pipelines.

KEY TALKING POINTS

- Frontend deployed live on Vercel (<https://terapyps-2-1yna.vercel.app>).
- Backend REST API live on Render (<https://speechcare-backend.onrender.com>).
- JWT bearer tokens & MongoDB Atlas cloud database.

Slide 10: Conclusion & Live Q&A;

Slide 10 of 10

VISUAL LAYOUT

Live App Link, Demo Credentials, Q&A; Title Card.

PRESENTER SCRIPT (WHAT TO SAY)

To summarize, SPEECHCARE AI transforms speech therapy from fragmented paperwork into a streamlined, interactive, and multilingual digital experience.

It empowers student therapists to learn effectively, enables supervisors to maintain high clinical standards, and provides patients with accessible therapy anytime, anywhere.

Thank you! I am now happy to open the floor to any questions and demonstrate our live application.

KEY TALKING POINTS

- Live application URL: <https://terapyps-2-1yna.vercel.app>
- End-to-end working platform across all 4 user roles.
- Ready for demonstration.
